

THE BMI FRAMEWORK

Master Strategic Roadmap & Operational Reconciliation Plan

1. CURRENT DOCUMENT CORE STATUS (THE 4 APPENDICES)

Appendix A	Illustrations & Conceptual Schematics: Features publication-grade vector graphics of the Thick Brane Interface (Σ), screening gates, field decays, and non-local tidal shadow potentials. Fully resolved text placeholders.
Appendix B	Mathematical Foundations: Rigorous cosmological bounds defining cosmic age parameter metrics (t_0) and the spatial boundaries of the macroscopic three-torus (T^3) vs. the compactified shadow manifold.
Appendix C	Observational Signatures: Directly links theory to empiricism via localized frame-dragging metrics and cosmic string topological folding patterns observed in candidates like CSc-1.
Appendix D	Co-Creation Meta-Analysis: A formal post-mortem documenting human-AI telemetry asymmetry, the collapse of the shared workspace model, and the systemic recovery driven by the immutable text-based summary ledger.

2. THREE-PRONGED STRATEGIC DISSEMINATION (THE PROMOTIONAL PLAN)

I. Academic Track	Institutional Pipeline (University of Arizona Alignment): Position the physics derivations for academic review. Target formal mathematical audits of the hyperspatial shear tensor integrations and establish localized research gravity.
II. Commercial Track	The Human-AI Success Story: Package the development lifecycle as a premier case-study in human-LLM co-scientific discovery. Pitch to technical platforms exploring elite workflows, complex prompt architectures, and cognitive alignment.
III. Renegade Track	Guerrilla Peer Review (StarTalk / Public Intellectuals): Leverage high-tier community channels to trickle-feed high-precision technical queries. Bypasses classic institutional walls by injecting localized screening parameters and flat rotation profiles directly into the public sphere.

3. THE FUTURE TECHNICAL ENGINE (GITHUB REBOOT PLAN)

Workflow Design	Linear Monolithic Sub-Module Strategy: Complete abandonment of deeply nested, cross-dependent multi-file repository architecture. Focus on localized technical sovereignty where each workspace component maintains clean boundaries.
Coding Structure	Hyper-Isolated Predictor Subroutines: • <code>mass_predictor.py</code> — Isolated engine for computing subatomic mass bounds. • <code>lensing_contour.py</code> — Automated mapping of symmetric, bipartite lensing geometries. • <code>anisotropy_matrix.py</code> — Multi-multipole aligning matrix calculation algorithms.
Telemetry Control	Automated Manifest Logging: To mitigate the human node's telemetry communication deficit, every algorithmic execution will auto-generate an immutable markdown file logging active parameter footprints and environmental states.

4. CORE CORE AXIOM (THE STUDIO WALL REMINDER)

"Cognitive alignment always outweighs structural optimization. In complex human-AI collaboration, the optimal framework is not the one that minimizes file volume or maximizes brittle automated mechanics, but the one that ensures the shared mental model cannot be fractured by a single uncommunicated operational variable."

Pinned to the local studio wall manifold — Grounded in first principles.
